## Wallbridge Updates Sudbury Exploration Progress; Plans Active Summer Program and Provides Additional Results from Broken Hammer Zone

Toronto, Ontario – May 25, 2005 – Wallbridge Mining Company Limited (TSX: WM) today announced additional drill results from its Broken Hammer Zone on the Wisner Property, and provided details of its plans for an aggressive summer work program on its Sudbury area properties.

### Broken Hammer Zone - Wisner Property

Results for an additional 11 holes have now been received, with results for an additional seven holes pending. The results continue to confirm the presence of higher grade material within the mineralized envelope at the Broken Hammer Zone.

The results from all holes recently received are tabulated below.

#### BROKEN HAMMER ZONE DIAMOND DRILL ASSAYS

Hole	From	To	Core Length	Pt	Pd	Au	Ag	Cu	Ni	Pt+Pd+Au
	(m)	(m)	(m)	g/t	g/t	g/t	g/t	%	%	g/t
WIS-046	4.50	10.00	5.50	0.42	1.14	0.62	4.03	0.55	0.05	2.18
WIS-048	30.50	35.00	4.50	18.84	5.31	0.67	62.72	1.74	0.14	24.81
and	55.60	56.00	0.40	7.31	25.70	0.19	0.96	0.84	0.02	33.20
WIS-053	41.00	49.00	8.00	0.76	1.05	0.45	7.98	0.31	0.04	2.26
and	62.00	70.00	8.00	1.80	1.32	0.51	6.42	0.24	0.03	3.63
WIS-054	22.00	26.90	4.90	1.38	1.45	0.39	3.26	0.98	0.06	3.22
WIS-055	36.00	41.50	5.50	0.61	3.17	4.95	15.98	1.47	0.08	8.73
WIS-056	8.50	12.50	4.00	0.92	2.48	1.02	1.16	2.19	0.24	4.42
and	18.40	18.85	0.45	0.21	9.94	0.68	1.39	12.20	0.14	10.83
WIS-057	97.00	99.00	2.00	7.55	8.84	0.22	3.54	0.64	0.09	16.60
WIS-058	36.00	41.00	5.00	0.72	0.98	0.19	3.52	0.92	0.08	1.90
WIS-060	95.00	99.00	4.00	1.55	3.60	1.16	12.86	0.30	0.04	6.31

Due to the nature of the mineralization, true width of individual intersections is difficult to determine with any accuracy. Metallurgical test work is currently underway at SGS Lakefield on material from the Broken Hammer Zone and Wallbridge has retained Roscoe Postle Associates Inc. to prepare an initial resource estimate for the Broken Hammer Zone mineralization.

Down hole geophysical surveys, both IP and UTEM, are now being carried out in some of the deeper holes to trace the mineralization to depth.

### **Wisner SCJV Property**

Six holes totaling 1715 metres were completed on the East Block of the Wisner Property, as part of the winter drilling program on the Sudbury Camp Joint Venture (SCJV). The holes targeted IP anomalies associated with Sudbury breccia. Minor chalcopyrite mineralization was intersected in several of the drill holes. Although no economically significant mineralization was intersected, the information from these holes indicates that the area is prospective and follow up work on the Sudbury breccia will be carried out during the summer program.

### **Trill Property (SCJV)**

Four drill holes, totaling 912 m, were completed on the Trill property. The drill holes tested IP anomalies along the flank of a major northwest trending magnetic low. Summer field work had located a large outcrop of metamorphosed Sudbury breccia with associated alteration and anomalous PGE levels in an area of very little outcrop. The holes drilled this winter confirmed the presence of a major belt of Sudbury breccia, approximately 200 m in width with associated anomalous chlorine values. These types of structures are favourable host rocks to footwall mineralization. The area will be further investigated by a deep penetrating 3D-IP survey as part of the summer program.

### **Windy Lake (SCJV)**

A single 900 metre drill hole was completed to test the up-plunge end of the Windy Lake sublayer embayment. A thick section of sublayer was intersected with disseminated pyrrhotite and minor chalcopyrite mineralization, however, a downhole UTEM survey did not locate conductors in close proximity to the drill hole. Wallbridge will continue to study the results to date with a view to identifying further drill targets. The Windy Lake embayment remains unexplored to depth.

### **Summer Program**

“We have a very active summer program planned, not only on the Wisner Property, but on many of our other Sudbury area properties”, stated Alar Soever, President of Wallbridge Mining. “We will have six mapping/prospecting/sampling field crews going all summer, and our JV budgets have provision for approximately 6,000 metres of drilling during the remainder of this year”.

“While we’re extremely pleased with Broken Hammer to date, we have a lot of other targets that need to be investigated. For example, on our Frost Lake property, located in the East Range, northeast of Falconbridge’s Nickel Rim South discovery, we identified a couple of new showings last fall and we are most anxious for an extensive follow-up with our summer program. We also have good soil geochemical anomalies on structures which trend right back to contact deposits”. “Right now, we’re completing an IP survey on these targets, and we’ll be following up those results this summer with further work including drilling.”

The Broken Hammer zone is located on the northern part of the Wisner Falconbridge 4X Joint Venture Property. This joint venture also includes the Frost Lake and Parkin properties. Wallbridge owns a 64% interest in these properties. Joint Venture partner Falconbridge Limited owns the remaining 36%. The Trill and Windy Lake properties are part of the Sudbury Camp Joint Venture (“SCJV”) with Lonmin

Plc. (“Lonmin”). Lonmin earns a 50% interest in any property on which a resource is established and can increase its interest to 65% by funding work through to commercial production.

Assays reported in this press release were completed at SGS Canada Inc. Mineral Services in Toronto, Ontario and ALS Chemex in Vancouver, B.C. using a standard fire assay for Au, Pt, Pd and sodium peroxide fusion/ICP finish for base metals.

The Qualified Person responsible for the technical content of this press release is Alar Soever, P.Geo, President of Wallbridge Mining Company Limited.

### **About the Company**

Wallbridge Mining Company Limited explores for and develops nickel, copper and platinum group element deposits. The Company's principal properties are located in the Sudbury Basin in Ontario. The Sudbury area hosts the world's largest concentration of nickel deposits and is currently the most active mining camp in North America. Wallbridge also has properties elsewhere in northern Ontario, Nova Scotia and near Duluth, Minnesota.
